The growing importance of peptides and modified peptides as drugs and the drive to escape from “flatland” has defined amino acids as a privileged class of building blocks. They are invaluable as starting materials for syntheses of complex molecules, highly diverse options for SAR optimisation and integral components of peptidomimetic drugs. (J. Med. Chem., 2016, 10807)

Liverpool ChiroChem can offer a wide range of readily available unnatural amino acids such as conformationally restricted, fluorinated and β -amino acids. Unique multi-functionalised amino acids are also an attractive choice to integrate DNA-encoded libraries.

Should you require analogues of these molecules to support your research activities do not hesitate to get in touch with us. Alternatively, if you would like to explore our complete range of products and services or require any further information regarding LCC, please use the enquiry button at the top of our webpage to get in touch.
