

Molecule of the Month

**Multi-functionalised Chiral Piperidines**

HCl

**A4089**

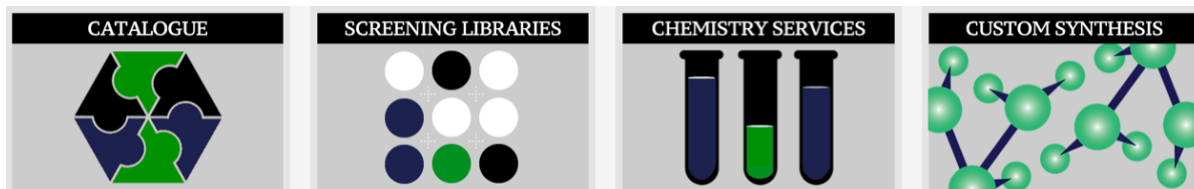

HCl

**A4090**

For this month's MOTM we've chosen to highlight two disubstituted chiral piperidines. Our R&D team have developed an efficient multi-step asymmetric synthesis to access these compounds on multi-gram scale. The levels of enantioselectivity and absolute configuration have been measured and confirmed, respectively. These small, highly functionalised molecules can readily be employed as building blocks and intermediates for small molecule drug discovery.

Should you require analogues of these molecules to support your research activities don't hesitate to get in touch with us. Alternatively, if you would like to explore our complete range of products and services or require any further information regarding LCC, please use the enquiry button at the top of our webpage to get in touch.
